

WinForm Code Snippet

Take text from a input box

```
string email = email_inp.Text;  
string pass = pass_inp.Text;
```

Check if a text box is empty or not

```
if (string.IsNullOrEmpty(email))  
{  
    // Code  
}
```

Show a message box

```
MessageBox.Show("Message to be show");
```

Hiding current form

```
this.Hide();
```

Open another form

```
Form_Name obj = new Form_Name();  
obj.Show();
```

Code Of Reset Button

```
email_inp.Text = string.Empty;  
pass_inp.Text = string.Empty;
```

Code Of Login Button

```
string email = email_inp.Text;  
string pass = pass_inp.Text;
```

```
if (string.IsNullOrEmpty(email))  
{
```

```
        MessageBox.Show("Empty field not acceptable");
    }
    else if (string.IsNullOrEmpty(pass))
    {
        MessageBox.Show("Empty field not acceptable");
    }
    else if (email == "abcd" && pass == "1234")
    {
        this.Hide();
        profile pro = new profile();
        pro.Show();
    }
    else
    {
        MessageBox.Show("Wrong input");
    }
}
```
